## <u>ITEM NO. 12 - REMARKS</u>

The proposed diversion rate is based on a well being designed to produce this rate of flow with a reasonable draw down. Research and testing will be completed prior to final design of the production well. In this manner, the size of the bore hole, casing, motor and pump will be selected to produce this rate of flow.

The total combined duty of Application No.s 57718, 57719, 57720, 57721 and 57723 is 50,000 acre feet. It is difficult to project the amount of water that will be utilized by any specific use in a municipality. The following estimates are based on an assumed average use of water for communities, commercial businesses and industries through out the State of Nevada. These estimates are in response to the State Engineer's letter dated July 24, 1992 and to NRS 530.340.

Commercial and industrial businesses are anticipated to utilize 20,000 acre feet per annum.

Residential use of water is anticipated to utilize 30,000 acre feet per annum. Based on an average use of approximately 250 gallons per person per day, the 30,000 acre feet per annum will provide water for 107,130 people. This equates to 42,852 residences based on an average of 2.5 people per residence. Based on an assumed growth rate of 2%, it is reasonable to expect a growth in residential demand that will require an additional allocation of 30,000 acre feet per annum.

Effluent derived from water diverted for municipal purposes will be utilized as a secondary source to satisfy environmental concerns.
